

STANDARD DRINK EQUIVALENTS

A standard drink is any drink that contains about 14 grams of pure alcohol (about 0.6 fluid ounces or 1.2 tablespoons). Standard drink equivalents are approximate since different brands and types of beverages vary in their actual alcohol content.

Note: It can be difficult to estimate the number of standard drinks in a single mixed drink made with hard liquor. Depending on factors such as the type of spirits and the recipe, a mixed drink can contain from one to three or more standard drinks.
